Like many animals and foods, frogs may carry salmonella bacteria which can cause illness. People with pet frogs should always follow these safety precautions:

- ◆ Wash hands thoroughly with soap and water immediately after handling anything, including water that comes in contact with water frogs.
- ◆ Always keep your pet frogs, the frog's habitat (e.g., aquarium or fish tank), and water from the habitat, out of the kitchen or anywhere food is kept, prepared or eaten.
- ◆ Don't allow young children to handle frogs, or any reptile or amphibian pet, without adult supervision. Always assist young children in thoroughly washing their hands when coming into contact with these pets or their habitat.
